

Blood Warmers are designed to warm the blood at the pulse points of the body so that the blood is pre-warmed before moving into the hands where it can be of most use and most importantly, felt. Rather than warming the hands directly where the blood leaves the hands returning to the body taking the heat with it.

Warm Your Blood

Blood Warmers are designed to warm the blood at the pulse points of the body so that the blood is pre-warmed before moving into the hands where it can be of most use and most importantly,

felt. Rather than warming the hands directly where the blood leaves the hands returning to the body taking the heat with it. Blood Warmers warm the blood at the pulse points before going into the hands. The heat is transferred to the blood at the pulse points can be felt by the user were they want it most in the hands.

Design

Blood Warmers help to keep hands warm and keep their dexterity by not needing bulky glove materials that interfere with the ability to work with small or detailed objects, or in tight spaces. Blood Warmers attach at the inner wrist with elastic wraps secured with velcro that hold a heat packet against the body's natural pulse points where the blood flow is closest to the skin surface. Witch transfers the heat from the heat pack to the blood flow towards the fingers. Blood Warmers are designed to be used for mechanics and repairmen, police and fire personnel, outdoor and extreme sports, hunters, fishermen, and enthusiasts of all kinds, as well as those with poor circulation due to age or medical condition. Blood warmers only work as well as the heat pack that is inserted in them. We cannot indorse nor recommend any one kind of hand warming devise or pouch. Grab your favorite hand warmer to add to your outdoor sports supply and hit the outdoors.

History of Blood Warmers

I noticed that when I was working in the garage or hunting I needed my hands to accomplish specific tasks that required my dexterity without gloves but I also needed my hands to be warm. It was hard to accomplish both with gloves. Gloves reduced the dexterity I needed to work and made my hands too bulky to fit into tight spots, but the weather and temperature I was in required thick gloves to try to keep warm. The problem was that even with the bulky gloves and heat inserts my hands were still often times cold, and without the dexterity I needed I could not work or hunt effectively.

Tired of having to choose between warm hands and working with

my hands in cold conditions, I decided it was time for a change. I designed Blood Warmers to pre-warm the blood at the body's natural pulse points. Pulse points are the places on your body where your blood flows close to the skin surface and where you can feel your pulse. By warming the blood at these points the blood carries the warmth into the extremities were it was needed, and keep the dexterity needed to work and play.

About our Emergency Services Supply

Blood Warmers make great additions to your emergency services supply and also to your outdoor sports supply.

Call us today to learn more about this amazing product.

* Blood Warmers require a heat source inserted into the wrist pocket to warm blood. Heat source not included.
